45) The truth value of the negation of a proposition in fuzzy logic is 1 minus the truth value of the proposition. What are the truth values of the statements "Fred is not happy" and "John is not happy"?

"Fred is happy" has a truth value of 0.8. The Truth value for "Fred is not happy" is 0.2. $1 - 0.8 = 0.2$.

"John is happy" has a truth value of 0.4.

The truth value of "John is not happy" is 0.6. $1 - 0.4 = 0.6$.

46) The truth value of the conjunction of two propositions in fuzzy logic is the minimum of the truth values of the two propositions. What are the truth values of the statements "Fred and John are happy" and "Neither Fred nor John is happy?"

The truth value for "Fred and John are happy" is $\min(0.8, 0.4) = 0.4$.

$0.4 < 0.8$. The truth value of the conjunction of two propositions in fuzzy logic is the minimum of the truth values of the two propositions.

The truth value for the statement "Neither Fred nor John is happy?" is 0.2. $0.2 < 0.6$.

47) The truth value of the disjunction of two propositions in fuzzy logic is the maximum of the truth values of the two propositions. What are the truth values of the statements "Fred is happy, or John is happy" and "Fred is not happy, or John is not happy?"

The truth value of "Fred is happy, or John is happy" is 0.8. $0.8 > 0.6$.

The truth value of "Fred is not happy, or John is not happy?" is 0.6. $0.6 > 0.2$.

48) Is the assertion "This statement is false" a proposition?

Yes, because the statement itself can be True or False. Perhaps the person is lying, or misinformed what they made the assertion.
